

Thesis/Project proposal

Name	System-Level Design Space Exploration for Dedicated Approximate Computing Systems
Contacts	Luigi Pomante (luigi.pomante@univaq.it) Vittoriano Muttillio (vittoriano.muttillio@univaq.it)
Type	Implementation, Research
Keywords	EDA, DSE, Approximate Computing
Description	<p>The work focuses on the extension of an ESL HW/SW Co-Design methodology in order to consider Approximate Computing techniques. In particular, the goal is to improve an existing DSE approach to suggest implementations that:</p> <ul style="list-style-type: none">- Exploit approximate computing techniques able to satisfy energy and/or timing requirements- Satisfy an “accuracy” requirement while minimizing energy requirements and/or satisfying timing requirements
Expected Duration	3-6 months
